

## **Declaration of Cooperation**

### **Siemens support for BME Odoo Project of the Solar Decathlon Europe 2012 Competition**

After many years of fruitful cooperation between Siemens and the University of Technology and Economics of Budapest (BME), Siemens decided to become a major sponsor of the Odoo project team, with the primary goal to support participation of BME in the Solar Decathlon international competition. The main goal of the competition is intensively using innovative green technologies, with the purpose of building a "green house". This concept fully reflects Siemens' objective to find and support the best - and especially the most innovative - solutions. The Odoo team - among others - is responsible for a renewable energy residential construction. This corresponds to one of the five Siemens Megatrend objectives, which is based on the utilization of freely available and renewable resources of the nature. This cooperation enables Siemens to integrate the appropriate technologies and products from its portfolio for complying with the modern environmental requirements. Beyond the financial support of Odoo project, Siemens also provides product and engineering support for the competing team.
